Fuller Creek Phase D – Willingham Pump Station Elimination, Capital Project No. 1153
Fuller Creek Phase F – Soper Street Forcemain
Fuller Creek Phase F – Pump Station Installation, Capital Project No. 1566
IEPA Project No. L17-5306

The Rock River Water Reclamation District (RRWRD) covers approximately 100 square miles of Winnebago County in northern Illinois. The District serves over 290,000 people in the communities of Rockford, Loves Park, Machesney Park, Roscoe, Cherry Valley, New Milford, Winnebago, a portion of Rockton, and several unincorporated areas within Winnebago County. The RRWRD owns and maintains a 1,126 mile network of gravity sanitary sewer lines that transport wastewater from residences, industrial sites, and other businesses to two (2) wastewater treatment plants: 1) 3333 Kishwaukee Street, Rockford, IL; 2) 600 W. Soper Street, Winnebago, IL.

Project Description

This project consists of abandoning two (2) satellite pump stations, installing 3,890 linear feet (LF) of forcemain, 970 LF of gravity sanitary sewer, and installing a new pump station to eliminate 100% of flow to the Winnebago Waste Water Treatment Plant, directing flow instead to the District's Fuller Creek trunk sewer system.

Community Benefits

The intent of these projects is to continue to provide safe, reliable, and affordable sanitary sewer collection services.

Funding for this project was provided by a low interest loan from the Illinois Environmental Protection Agency's Water Pollution Control Loan Program (WPCLP). The WPCLP is funded by both state and federal sources.
